Maersk FPSOs – Environmental Policy

Maersk FPSOs is committed to protecting the environment and the prevention of pollution.

Maersk FPSOs develops, builds, installs, and operates systems that meet the requirements of each field while considering our influence upon the environment at all times. This is reflected by the emphasis we place on our environmental aspects of managing our business both offshore and onshore and from the initial project phase to the operation of the units.

We foster this commitment through the implementation of environmentally sustainable processes, pollution prevention, and a continual improvement focus in the processes of design, construction, delivery, and repair of FPSOs and in other contracted products and services.

As a signatory to the UN Global Compact Maersk FPSOs supports a precautionary approach to environmental challenges, undertakes initiatives to promote greater environmental responsibility, and encourages development and diffusion of environmentally friendly technologies.

By means of target setting, awareness and training combined with monitoring and analysis, we aim to continuously reduce our impact on the environment. We do our utmost to find innovative improvement solutions to avoid harm to the environment.

This is achieved by:

- Management commitment throughout the organization
- Employee involvement in environmental performance
- Activities aimed to meet or exceed applicable environmental laws, regulations and other requirements
- Objectives settings and periodical reviews at all level of the organisation
- Compliance with ISO 14001 and its supporting principle of continual improvement
- Providing appropriate training to ensure that employees understand how their working activities can influence the environmental impact of our work
- Environmental improvement activities based on sustainable, cost beneficial, and proven principles relying on the best available technology as well as innovation
- Cooperation with external partners regarding innovation and improvement projects
- Encouragement and integration of environmental considerations into business planning and decisions including design, production, facilities management, and product support.
